

AN EVENT ON ALTERNATIVE ENERGY

21 - 23 FEBRUARY 2025
EXPO CENTRE LAHORE

Our Vision:

Pakistan Sustainability Week (PSW) is dedicated to accelerating global sustainable development in Pakistan and beyond. Pakistan's geography is marked by vast open spaces, making it a prime location for alternative energy methods to flourish the country. Pakistan Sustainability Week will showcase various alternative energy sources contributing to the country's sustainable future such as solar energy initiatives, hydro power and wind projects along with multiple innovative energy storage solutions.

What it's Really About:

PSW brings together leaders from various sectors, including heads of state, policy makers, industry leaders, investors, entrepreneurs, and youth, to discuss innovative alternative energy solutions. PSW provides a platform for stakeholders to share their experiences, showcase their sustainability initiatives, projects, learn from one another and collaborate on initiatives that promote sustainable development. The itinerary is filled with a series of conferences, workshops, and exhibition, highlighting the latest trends in alternative energy development.

One of the key objectives of Pakistan Sustainability Week is to raise awareness about the importance of alternative energy and encourage attendees to take bold actions towards a sustainable future. Participants engage in lively discussions, sharing their own expertise, and exploring innovative approaches to sustainability as a team. The involvement of youth in the event is particularly crucial, students from local universities will be invited to showcase their ideas and creations, as they are the future leaders who will inherit the planet leading us into the new age of technology. Our goal is to connect people from all walks of life and educate them about the importance of alternative energy.

Exhibitor Profile:

- Solar Panel Manufacturers
- Investors and Financers
- Rooftop Solar Systems, Commercial and Industrial Energy Users
- Photovoltaic (PV) Modules
- Hybrid Systems, Materials and Equipment
- Installation and Turn Key Suppliers
- Utilities, Solar Power Generators and Developers
- Wind-Solar Hybrid Power System Integrators
- Battery Manufacturers
- Wind Electric Generator (WEG) Manufacturers
- Engineering Consultancy
- Battery Components and Materials
- Channel Partners and Distributors
- Inverters
- Charge Controllers and Module Connectors
- Wind Farm Owners
- Stand-Alone Small Aero-Generator Manufacturers and Training Providers
- Consultants and Certification Agencies
- Wind Monitoring and Analysis Systems
- Installation and Turnkey Suppliers
- Maintenance Contractors
- Technical Consultants
- And Many More...
